PROFESSIONAL SUMMARY

AI/ML Engineer with 2+ years of experience building production-grade Generative AI and classic ML/NLP systems across financial audit automation, compliance, and computer vision. Skilled in agentic AI frameworks (LangGraph, LangChain, MCP), RAG pipelines, transformer-based NLP (BERT), and LLM fine-tuning, with hands-on deployment to Azure and AWS. Proven track record shipping scalable, secure multi-agent systems that drive measurable business impact.

TECHNICAL SKILLS

- Machine Learning & NLP: Classic ML, NLP, BERT, Transformers, Deep Learning, OCR, Computer Vision (YOLO, U-Net, CNNs)
- Generative AI & Agents: Agentic AI, LangGraph, LangChain, MCP (Model Context Protocol), ReAct Agents, CrewAI, Prompt Engineering, RAG, Embedding Models
- Languages & Cloud: Python, SQL (PostgreSQL, MySQL), Bash, Azure Cloud, Azure AI, AWS (familiarity)
- Frameworks & Core ML: FastAPI, Flask, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, SciPy, OpenCV
- Databases & Tools: MongoDB, Vector Databases (FAISS, ChromaDB), Ollama, Git, Docker, REST APIs, Jira/GitHub (Agile/Scrum)

WORK EXPERIENCE

AI Developer — Moksha Infotech, India

December 2024 – Present

- Architected 3 end-to-end AI automation pipelines for financial audit and banking compliance workflows using FastAPI, reducing manual review cycles by 30% across enterprise client engagements.
- Fine-tuned Mistral 7B LLM on 10,000+ domain-specific financial documents for automated report generation, enhancing data extraction accuracy by 25% using supervised techniques.
- Spearheaded Generative AI risk and compliance-check solutions, eliminating 8+ hours of weekly manual validation while strengthening operational internal controls.
- Orchestrated multi-step agentic workflows using LangChain/LangGraph for autonomous decision-making across 5 financial stages, cutting human intervention by 40%.
- Mentored 4 AI junior developers via weekly technical code reviews, promoting secure coding practices and reducing production bug rates by 35% over a 6-month period.
- Collaborated with cross-functional enterprise stakeholders to deploy high-quality, scalable REST APIs aligned strictly with client risk parameters and business objectives.

AI Engineer Intern — Mayowish, Bangalore, India

August 2023 – May 2024

- Optimized a Python-based template-matching module using OpenCV, boosting image processing speed by 30% to handle real-time analysis of 10,000+ daily product assets.
- Streamlined secure text extraction from 500+ scanned documents per week via Tesseract OCR pipelines, safeguarding data integrity and improving downstream accuracy.
- Executed a CNN image-classification model in PyTorch achieving 92%+ accuracy across 15+ product defect categories on 50,000+ labeled images.
- Cultivated deep technical capabilities across 3 concurrent computer vision projects covering object detection (YOLO) and image segmentation (U-Net).

PROJECTS

SEFA Audit & Financial Automation Pipeline | Python, FastAPI, Qwen 2.5, LangGraph, MCP, PostgreSQL

- Engineered an autonomous SEFA financial audit pipeline processing 100+ page government PDFs across capital assets and compliance tables to replace manual review cycles.
- Programmed a LangGraph-style autonomous AI agent with 5-step iterative reasoning loops to self-correct LLM extraction errors and align with federal compliance standards.
- Slashed batch PDF processing times by 60% via a hybrid ProcessPoolExecutor/ThreadPoolExecutor architecture; implemented Qwen 2.5 via Ollama for structured JSON extraction, eliminating non-determinism across 1,000+ records.
- Resolved edge-case coverage constraints by introducing a cloud LLM fallback layer, securing a 98%+ extraction accuracy rate while adhering to data privacy controls.

Enterprise Workflow Platform | FastAPI, React, PostgreSQL, Qwen 2.5, Globodex EDMS

- Led a 3-person engineering team to deliver a modular enterprise workflow platform enabling business users to design custom processes via a visual React interface.
- Pioneered an internal API plugin architecture supporting 10+ reusable workflow modules including AI document extraction and vendor quotation comparison.
- Embedded Qwen 2.5 into the core workflow engine for intelligent field extraction from unstructured PDFs, replacing 4+ hours of daily manual entry.
- Authored 15+ technical deliverables (architecture flowcharts, testing docs, API docs) to support successful client onboarding.

EDUCATION

Bachelor of Technology in Computer Engineering (AI Specialization)

August 2020 – April 2024

Poornima University, Jaipur, India

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (AI-900) | Data Manipulation in Python – Udemy
